Urban Construction

Some building and construction management courses offer a year in industry, giving you the chance to develop professional contacts and build on your practical skills. Alternatively, you could apply for a summer placement with a building or construction company.

- The authors are both established figures in the urban construction field
- The book will help contractors keep projects on time and within budget

This book reviews the general theory of strategy, relates it to the particular circumstances of the construction industry, and shows how it can be applied in practice. It brings together ideas from economics, marketing, management, business and politics to develop strategic management for both contractors' firms and the associated professions. Substantial changes have occurred in the industry since the book was first published in 1991. This Second Edition reflects the major developments that have followed the Latham and Egan reports, and includes new chapters on international strategy and marketing, showing how they can contribute to the strategic planning of construction organizations. The book will provide a valuable tool for the strategic development of construction firms. "Ten years separate the editions during which period a significant number of British, (and other), construction firms which had survived generations of proprietors merged, changed beyond recognition or ceased trading. One can not but wonder if publication of a work on strategic planning some twenty year earlier might have saved some of them." Construction Manager "The book presents the essential elements for managing at this higher level and should be a must for any construction professional who aspires to an executive position in industry as well as any student for construction management, project management and organizational management in construction. It comes highly recommended" Engineering, Construction and Architectural Management

This book bridges the gap between the theoretical and practical and includes chapters on planning the project, starting it, scheduling, running the projects, completing it, people, materials, equipment, quality, safety, subcontractors, contractual and financial. These chapters are broken into multiple sections providing a step-by-step guide to successfully managing a construction project, and, including what-not-to-do to avoid costly mistakes.--COVER.

Open Design refers to a stakeholder-oriented approach in Architecture, Urban Planning, and Project Management, as developed by the Chair of Computer Aided Design and Planning of Delft University of Technology. This edition collects the following three volumes on Open Design: Open Design, a Collaborative Approach to Architecture, offers concepts and methods to combine technical and social optimisation into one integrated design process. Open Design and Construct Management, Managing Complex Construction Projects through Synthesis of Stakeholder Interests, offers a new approach to managing complexity by distinguishing best management practices for complex projects involving considerable uncertainty and risk and best practices for straightforward predictable projects. Open Design, Cases and Exercises, enables the reader to become familiar with the decision-oriented design tools of Open Design, and their application in practice.

Cities across the globe are looking to develop affordable, environmentally friendly, and socially responsible transportation solutions that can meet the accessibility needs of expanding metropolitan populations and support future economic and urban development. When appropriately planned and properly implemented as part of a larger public transportation network, urban rail systems can provide rapid mobility and vital access to city centers from surrounding districts. High-performing urban rail services, when carefully approached as development projects, can help enhance quality of life by giving citizens access to employment opportunities, essential services, urban amenities, and neighboring communities. The purpose of this Handbook is to synthesize and disseminate knowledge to inform the planning, implementation, and operations of urban rail projects with a view towards: -- Emphasizing the need for early studies and project planning; -- Making projects more sustainable (economically, socially, and environmentally); -- Improving socioeconomic returns and access to opportunities for users; -- Maximizing the value of private participation, where appropriate; and -- Building capacity within project implementing and managing institutions This Handbook provides experiential advice to tackle the technical, institutional, and financial challenges faced by decision makers considering urban rail projects. It brings together the expertise of World Bank staff and the input of numerous specialists to synthesize international 'good practices' and recommendations that are independent of commercial, financial political, or other interests. The material presented is intended as an honest-broker guide to maximize the impact and manage the challenges of urban rail systems in cities in both developed and developing countries. Rather than identify a single approach, this Handbook acknowledges the complexities and context necessary when approaching an urban rail development by helping to prepare decision makers to ask the right questions, consider the key issues, perform the necessary studies, apply adequate tools, and learn from international good practice all at the right time in the project development process.

Civil Engineering and Urban Planning III addresses civil engineering and urban planning issues associated with transportation and the environment. The contributions not only highlight current practices in these areas, but also pay attention to future research and applications, and provide an overview of the progress made in a wide variety of topics in the areas of: - Civil Engineering - Architecture and Urban Planning - Transportation Engineering Including a wealth of information, Civil Engineering and Urban Planning III is of interest to academics and students in civil engineering and urban planning.
