This is the official FBI Guide to the Science of Fingerprints... material the Bureau has provided to law enforcement agencies worldwide, and after several decades of trying criminal cases I strongly suggest that no defense attorney should be without this book in his or her library for reference before entering any trial in which fingerprint evidence might be submitted. Too often I've seen police testify that there was a 'match' between the defendant's prints and those found at the scene of a crime, and if a hearsay objection is overruled, without the information contained in this book, the average defense attorney is at a disadvantage to cross-examine the witness as to the details of how this conclusion was reached, - and also not competent to launch a credible protest to a fingerprint expert's qualification to testify, thereby eliminating some lab employee one step above janitor from testifying as to his opinion about alleged match being found. It's also nice to have enough knowledge to ask some procedural questions of a lab tech that 'lifted' the subject prints, and the method used for comparison, because in real life, those fantastic computer screens seen in the CSI television shows comparing prints and the fact that a 'match' exists, never seem to make it into the courtroom. If you think you already know enough about dermatoglyphics to cross-examine some qualified fingerprint expert, then give yourself this vocabulary test on 22 terms that a fingerprint witness might use, and see if you know what each one of them means in relationship to the science of fingerprints... and if you fail the test, then start reading this book before your next trial.. and if you can't, don't worry... this book contains more than 432 illustrations, giving you everything you need to know about fingerprints. This book examines Ghana's use of the fingerprint biometric technology in order to further conversations about localization championed by technical communication scholars. Localization, in this case, refers to the extent to which users demonstrate their knowledge of use by subverting and reconfiguring the purpose of technology to solve local problems. Dorpenyo argues that the success of a technology depends on how it meets the users' needs and the creative efforts users put into use situations. In User Localization Strategies in the Face of Technological Breakdown, Dorpenyo advocates studying how users of technological systems construct knowledge about the technology and develop local strategies to solve technological breakdowns. By analyzing technical documents and interview transcripts, the author identifies and advances three user localization strategies: linguistic localization, subversive localization, and user-heuristic experience localization, and considers how biometric systems can become a tool of marginalization.

The idea of The Fingerprint Sourcebook originated during a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.
