It is predicted that by 2050, 22% of the world's population will be over 60 years of age. This rapid shift in demographics calls for the development of coherent and forward-looking policies to address the many challenges which will inevitably arise as a result. This book presents 33 articles from the workshop jointly organized by APEC and OECD held in Waseda University, Tokyo, Japan, in September 2012. At this workshop, a group of international experts described a wide range of important issues associated with an aging population, and discussed how both governments and the private sector can best mobilize innovation and research to transform this global challenge into an opportunity for active and productive aging and new sources of sustainable growth. The authors call for a comprehensive approach to achieve policy coherence, as well as for strengthening public-private partnerships and promoting collaboration among multiple stakeholders and systems. The book is divided into six chapters, covering such subjects as lessons learnt from best practice, solutions for the aging society, policy initiatives, health innovation, smart communities and new services. Innovation will be necessary to meet the challenges and to mitigate the health, social and economic impacts of an aging population worldwide, as well as unlocking the potential of ICTs through increased research and new models. This book will be of interest to all those whose work involves the development of new services for older people in sectors such as health and nursing care, education and training, transportation, community development and smart cities, among others.

This two-volume set (LNAI 8019 and LNAI 8020) constitutes the refereed proceedings of the 10th International Conference on Engineering Psychology and Cognitive Ergonomics, EPCE 2013, held as part of the 15th International Conference on Human-Computer Interaction, HCIII 2013, held in Las Vegas, USA in July 2013, jointly with 12 other thematically similar conferences. The total of 1666 papers and 303 posters presented at the HCIII 2013 conferences was carefully reviewed and selected from 5210 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of human-computer interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. The total of 81 contributions included in the EPCE proceedings were carefully reviewed and selected for inclusion in this two-volume set. The papers included in this volume are organized in the following topical sections: cognitive issues in HCI; measuring and monitoring cognition; cognitive issues in complex environments; productivity, creativity, learning and collaboration.

This book gathers the proceedings of a symposium on the role of Internet technologies and how they can transform and improve people's lives. The Internet is essentially a massive database where all types of information can be shared and transmitted. This can be done passively in the form of non-interactive websites and blogs; or it can be done actively in the form of file sharing and document up- and downloading. Thanks to these technologies, a wealth of information is now available to anyone who can access the Internet. Moreover, Internet technologies are constantly improving: growing faster, offering more diverse information, and supporting processes that would have been impossible in the past. As a result, they have changed, and will continue to change, the way that the world does business and how people interact in their day-to-day lives. In conclusion, the symposium and these proceedings provide a valuable opportunity for leading researchers, engineers and professionals around the globe to discuss the latest advances that are helping the world move forward. They also facilitate the exchange of new ideas in the fields of communication technology to create a dialogue between these groups concerning the latest innovations, trends and concerns, practical challenges and potential solutions in the field of Internet technologies.

Painter IX Creativity is a comprehensive creative guide to Corel's Painter IX Software. It explains the basics of setting up, understanding, customizing, and applying Painter to create original works, paintings, generating painterly animations, manipulating and transforming photographic images, and constructing evocative photo-collage. The projects include advanced techniques and creative strategies. The book gives visual artists-digital designers, multimedia artists, photographers, illustrators, animators, and graphic artists-the explanations they need in order to maximize the sophisticated, creative Painter tool. The book teaches the artist how to transfer traditional art skills and techniques to the computer. It teaches the animator how to add painterly effects to their work, whether for video, TV, or the web. IT explains how photographers can transform and collage their images with natural-media tools. For Adobe Photoshop users, this book explains the expanded creative potential Painter lends to their work. The author takes a knowledgeable and straightforward approach to this step-by-step project-based book, explaining how each tool is used, every effect achieved, and every topic thoroughly described. The book allows readers to build upon their knowledge so that beginners have the chance to become advanced users, and advanced users have an opportunity to hone their skills and adopt new techniques.
