Sam Driver, renegade CIA operative, is back in this new high octane, action-packed espionage adventure. When a sinister group of cyberterrorists holds the world to ransom with a devastating global attack, Sam Driver and her covert team are sent to hunt them down. But little do they suspect just how sophisticated their targets are -- or the terrifying nature of their plans. As the net closes on the criminal mastermind at the heart of the plot, Sam finds herself questioning the motives behind her team's actions. This wasn't the mission she thought she'd signed up for. When it comes to ensuring a safer, better world, can the ends ever justify the means? The second pulse-raising instalment in the Sam Driver Thrillers, Viper Nine is perfect for fans of Lee Child and David Baldacci.

A concise and thoroughly practical guide to building and installing car alarms. The project-based approach makes this book ideal for students and hobbyists; design and installation engineers will also find it of interest. Every circuit in this book is clearly described and illustrated, and contains components that are easy to source. Advice and guidance are based on real experience, and the designs themselves have been rigorously put to use on some of the most car-crime-ridden streets in the world. The designs in this book include systems as simple as a warning beacon, a range of immobilisers, and a basic alarm system; and more advanced systems that include add-on features such as a personal attack button and a courtesy light delay. Intruder detectors are described, and full constructional details are given including a guide to fault diagnosis and step-by-step installation instructions.
