~~Viva Voce in Electrical Engineering by DK Sharma is a very important book for Engineering Students.This book contains good Amount of Electrical Engineering Interview Questions and Answers.This book will help you to prepare for any types of Interview.This book can be used as a Reference book, GATE Preparation, Competitive exam Preparation, Campus interview, and study related to Electrical ...~~

This book is for the course on Machine Drawing studied by the undergraduate mechanical engineering students in their 3rd semester. Unique to this is the coverage of CAD alongside the conventional discussions on each topic.The important topics pertaining to engineering drawing are covered before discussing the machine drawing concepts thus making this a complete offering on the subject.

This book is meant for the Engineering Drawing course offered to the students of all engineering disciplines in their first year. An important highlight of this book is the inclusion of practical hints along with theory which would enable the students to make perfect drawings.

Although the world of drawing has changed from graphite technology (i.e. conventional pencils, drawing paper, instruments and associated skills) to graphic technology (i.e. computer assisted drawing and drafting), the basics of the subject are equally important in either of the approaches. The teaching-learning process for engineering drawing calls for more imaginative thinking on the part of the student than may be needed for learning other subjects and ingenious ways for the teacher for communicating with the students so as to develop a scheme that enables a student to translate 3D visualization into a 2D graphic representation on a drawing in an easy manner. Learning engineering drawing is thus learning a new language for effective communication and uniform understanding between people dealing with physical objects. The book also includes a chapter on AutoCAD which will serve as a good course material to students and teachers of engineering drawing. The language used for presentation has been simple, since the focus is the first year students just entering the engineering discipline. The CD enclosed with the book contains "Power point presentations on Conversion of Orthographic view to Isometric and Conversion of Pictorial view to Orthographic Projections" to facilitate students as well as the teachers.
