Solution: 1. (a) The average speed will be equal to 20 m/s because you will spend an equal amount of time driving at the lower speed as at the higher speed. The average speed is therefore the mean value of the two speeds. 2. (b) The best answer is III. Equal time is spent at 15 m/s and 25 because that fact is stated in the question.

accessible treatments of a wide variety of subjects, including straight line motion, measurement, vectors, and kinetic energy, the book is an invaluable reference for physics educators and students.

The print study guide provides the following for each chapter: Objectives Warm-Up Questions from the Just-in-Time Teaching method by Gregor Novak and Andrew Garvin (Indiana University-Perdue University, Indianapolis) Chapter Review with two-column Examples and integrated quizzes Reference Tools & Resources (equation summaries, important tips, and tools) Puzzle Questions (also from Novak & Garvin's JITT method) Select Solutions for several end-of-chapter questions and problems

This book arms engineers with the tools to apply key physics concepts in the field. A number of the key figures in the new edition are revised to provide a more inviting and informative treatment. The figures are broken into component parts with supporting commentary so that they can more readily see the key ideas. Material from The Flying Circus is incorporated into the chapter opener puzzlers, sample problems, examples and end-of-chapter problems to make the subject more engaging. Checkpoints enable them to check their understanding of a question with some reasoning based on the narrative or sample problem they just read. Sample Problems also demonstrate how engineers can solve problems with reasoned solutions.

A groundbreaking textbook on twenty-first-century plasma physics and its applications Kip Thorne and Roger Blandford ' s monumental Modern Classical Physics is now available in five stand-alone volumes that make ideal textbooks for individual graduate or advanced undergraduate courses on statistical physics; optics; elasticity and fluid dynamics; plasma physics; and relativity and cosmology. Each volume teaches the fundamental concepts, emphasizes modern, real-world applications, and gives students a physical and intuitive understanding of the subject. Plasma Physics provides an essential introduction to the subject. A gas that is significantly ionized, usually by heating or photons, a plasma is composed of electrons and ions and sometimes has an embedded or confining magnetic field. Plasmas play a major role in many contemporary applications, phenomena, and fields, including attempts to achieve controlled thermonuclear fusion using magnetic or inertial confinement; in explanations of radio wave propagation in the ionosphere and the behavior of the solar corona and wind; and in astrophysics, where plasmas are responsible for emission throughout the electromagnetic spectrum, including from black holes, highly magnetized neutron stars, and ultrarelativistic outflows. The book also can serve as supplementary reading for many other courses, including in astrophysics, geophysics, and controlled fusion. Includes many exercise problems Features color figures, suggestions for further reading, extensive cross-references, and a detailed index Optional " Track 2 " sections make this an ideal book for a one-quarter or one-semester course An online illustration package is available to professors The five volumes, which are available individually as paperbacks and ebooks, are Statistical Physics; Optics; Elasticity and Fluid Dynamics; Plasma Physics; and Relativity and Cosmology.

Not illustrated. 1888 edition. Excerpt: ...apparel and sought and obtained employment as a teamster in the quartermasters department. Her features were very large, and so coarse and masculine was her general appearance that she would readily have passed as a man, and in her case the deception was no doubt easily practiced. Next day the "she dragoon " was caught, and proved to be a rather prepossessing young woman, and though necessarily bronzed and hardened by exposure, I doubt if, even with these marks of campaigning, she could have deceived as readily as did her companion. How the two got acquainted I never learned, and though they had joined the army independently of each other, yet an intimacy had sprung up between them long before the mishaps of the foraging expedition. They both were forwarded to army headquarters, and, when provided with clothing suited to their sex, sent back to Nashville, and thence beyond our lines to Louisville. On January 9, by an order from the War Department, the Army of the Cumberland had been divided into three corps, designated the Fourteenth, Twentieth, and Twenty-first. This order did not alter the composition of the former grand divisions, nor change the commanders, but the new nomenclature was a decided improvement over the clumsy designations Right Wing, Centre, and Left Wing, which were well calculated to lead to confusion sometimes. McCooks wing became the Twentieth Corps, and my division continued of the same organization, and held the same number as formerly--the Third Division, Twentieth Corps. My first brigade was now commanded by Brigadier-General William H. Lytle, the second by Colonel Bernard Laiboldt, and the third by Colonel Luther P. Bradley. On the 4th of March I was directed to move in light marching order toward Franklin
