Current safety trends encourage shooters to opt for guns of less power, especially CO₂-powered guns. Several airgun shooters are not required to go through the traditional buying procedures of high-powered pistols and rifles, such as background checks and waiting periods. Plus, companies such as Colt, Smith & Wesson, and Walther manufacture high quality CO₂ products that are visually indistinguishable from their traditional firearms. In this new guide to CO₂-powered pistols and rifles, James E. House offers a comprehensive history of CO₂ guns, dating back to the 1930s, and a discussion of propulsion, pellets, and sights. Beginning shooters are introduced to the market with a complete analysis on performance and accuracy of currently available products. Airgun enthusiasts are reunited with CO₂ classics no longer

eventful quarter of a century and adopted by numerous police organization in the Far East and elsewhere. It covers everything from the purpose of the pistol, to selection, training, advance methods and more! This book was the first time that fighting with firearms was clearly and explicitly disassociated from classical target/range shooting. The proven techniques displayed have spawned most modern pistol techniques because of their simplicity and effectiveness. It is written as instruction to police forces in the methods of shooting (reflexive/instinctive) and training (realistic/challenging) that the author developed over two decades active service in Shanghai.
