Richie covers the so what of blockchain as opposed to the crowded area of the what of blockchain. In the 1st half readers self-realize that a trust gap is exponentially expanding in commerce, and humans are carrying the unnecessary burden to always trust but verify with intermediaries. Today, we the human species start every company or transaction with the automatic subliminal assumption that counterparties cannot be trusted. In the 2nd half, Richie re-positions blockchain from a paradigm that is looking for a problem, into a paradigm that would help close the trust gap. Blockchain, mankind's first opportunity for trusted commerce at global scale. About the Author

In recent years, there has been increasing interest from geoscientists in potassic igneous rocks. Academic geoscientists have been interested in their petrogenesis and their potential value in defining the tectonic setting of the terranes into which they were intruded, and exploration geoscientists have become increasingly interested in the association of these rocks with major epithermal gold and porphyry gold-copper deposits. Despite this current interest, there is no comprehensive textbook that deals with these aspects of potassic igneous rocks. This book redresses this situation by elucidating the characteristic features of potassic (high-K) igneous rocks, erecting a hierarchical scheme that allows interpretation of their tectonic setting using whole-rock geochemistry, and investigating their associations with a variety of gold and copper-gold deposits, worldwide. About two thirds of the book is based on a PhD thesis by Dr Daniel Muller which was produced at the Key Centre for Strategic Mineral Deposits within the Department of Geology and Geophysics at The University of Western Australia under the supervision of Professor David Groves, the late Dr Nick Rock, Professor Eugen Stumpf!, Dr Wayne Taylor, and Dr Brendon Griffin. The remainder of the book has been compiled from the literature using the collective experience of the two authors. The book is dedicated to the memory of Dr Rock who initiated the research project but died before its completion.
